

As a motivated and detail-oriented individual eager to embark on a career in cybersecurity, I am equipped with a foundational understanding of ensuring the confidentiality, integrity, and availability of systems, networks, and data. Along with a curious mind, I value the fruits of intentional hard work and have always had a propinquity towards computer science and information technology.

My academic background, coupled with hands-on experiences, has equipped me with the skills to contribute to the planning, analysis, and implementation of information systems security programs.

I am adept at administering IT principles and security products to safeguard information system resources, and I am enthusiastic about learning and applying security policies and procedures for Local Area Networks (LAN) and Wide Area Networks (WAN). With a keen interest in risk analysis and security testing, I am excited to bring my dedication and emerging expertise to support the objectives of the U.S. Department of Energy in a Security Analyst role.
